RELEASE CANDIDATE

PMPro v3.9 is ready to test

RC 1 is out now for sites with a developer on the team. The full release is October 27.

SWIPE →

PAYMENT AND EXPIRATION DATES

Bill on the 1st. Expire on December 31.

Subscription Delays and Set Expiration Dates are now **built into core**, with a new date pattern builder on every level.

DISCOUNT CODES

Run “20% off everything” in two fields.

New percentage and fixed amount codes follow each level’s **current price**, so you set the code up once.

SECURITY

Captcha on login and password reset.

Choose Google reCAPTCHA or Cloudflare Turnstile. On login, it only appears after a **failed attempt** or other suspicious activity.

PAYMENT GATEWAYS

A safer way off a deprecated gateway.

A step-by-step tool moves your subscriptions to Stripe, with a **dry run on by default** so you can preview every change first.

FOR DEVELOPERS

WP-CLI, the Abilities API, and structured data.

Manage members from the command line, let AI tools work with your site through the **WordPress Abilities API**, and show search engines your level pricing.

TRY IT

Full release and launch party on October 27.

Download RC 1 and read every change in the release notes.
