

MEMBERS-ONLY TOOLS

Lock an **AI artifact** behind your membership

That interactive tool Claude or ChatGPT built for you? You can serve it to members only, in the browser.

SWIPE →

THE SETUP

More than one file.

AI tools now hand you a self-contained **index.html plus a data file**, sometimes its own CSS, JavaScript, and images. A calculator, a directory, an interactive tool.

WHY THE USUAL WAY BREAKS

Relative links break.

The Restricted Files directory is built for single downloads like a PDF or a ZIP. Give a multi-file artifact a query-string URL and its **relative links stop resolving**.

THE FIX

Keep the real path.

A rewrite rule routes the folder to a small script that checks the member, then serves the file. The URL stays a normal path, so `fetch('./data.json')` just works.

HOW IT STAYS LOCKED

Verify, then serve.

The script confirms the visitor with `pmpo_hasMembershipLevel()`, validates the path, and sends the file inline so it renders in the browser instead of downloading.

THE TAKEAWAY

**Any folder
can be
members-only.**

If the file is not sensitive, an iframe on a protected page is enough. When it needs real protection, this method gates the whole folder.
