

HOW TO

Let members submit content with **WS Form**

Build a frontend submission form, keep editorial control, and gate it by membership level.

SWIPE →

STEP 1

Build the submission form.

WS Form's Post Management Add-On can **auto-create a form** with mapped fields for your post type: title, content, categories, tags, and featured image.

STEP 2

Gate it by membership level.

Protect the page with the Require Membership box, or wrap the shortcode: `[membership level="1"]`
`[ws_form id="123"][/membership]`.

STEP 3

Keep editorial control.

Set the default submission status to **Pending or Draft** so member content never goes live on its own. You review, then publish.

STEP 4

Limit how much they post.

WS Form's Limit settings cap submissions with a **Maximum Count and duration**, like a set number per month, so one member can't flood your queue.

STEP 5

Then show it off.

Display approved submissions through post type archives, a Query Loop block, or a posts table. Members write the content, you decide what gets seen.
